Refreshments and study materials will be provided.

"The right to search for truth implies a duty; one must not conceal any part of what one has recognized to be true".

Albert Einstein

Introduction

Intellectual property (IP) is a term referring to a number of distinct types of creations of the mind for which property rights are recognized and the corresponding fields of law. Under intellectual property law, owners are granted certain exclusive rights to a variety of intangible assets, such as musical, literary, and artistic works; discoveries and inventions; and words, phrases, symbols, and designs. Common types of intellectual property include copyrights, trademarks, patents, industrial design rights and trade secrets in some jurisdictions.

These exclusive rights allow owners of intellectual property to benefit from the property they have created, providing a financial incentive for the creation and investment in intellectual property, and, in case of patents, pay associated research and development costs.

So join us on this great venture and learn things from the professionals in this field
